**High Power DMX Decoder & Driver**  
**Item NO.: PXL24-1-576**

Meets DMX512/1990  
Max. 1/CH output

**SUMMARIZE**

Thanks for your using PX series DMX512 decoder & driver. PX series adopt the advanced micro-computer control technology and converted the DMX512/1990 digital signal widely used in international to the analog control signal. 1~24 channels output for option and each channel able to achieve 256 gradations of controlling, and also it can be used as the connector of PC digital-light controller and analog light modulator. It is mainly used for the controlling of buildings & lights applied LED.

**Product Features**

- ◆ Meets DMX512/1990
- ◆ With 256 gradations and full-color control
- ◆ With 24 channels output and Max.1A/CH output
- ◆ Can achieve the asynchronous color changes effect under working with DMX controls system.
- ◆ With the light color selected mechanism, and be able to control the light with 1~3 colors
- ◆ Set the DMX address code freely
- ◆ With good noiseproof feature
- ◆ Custom-made

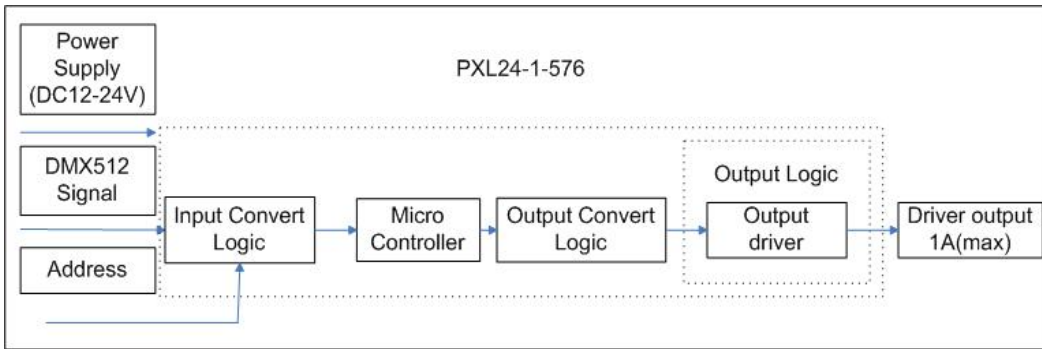

**Tech-parameter**

Decode CH. :	24 Channels	
Signal Input:	DMX-512/1990 Standard digital signal	
Signal Output:	0~24V, Max.1A/CH.	
Power Supply:	DC12-24V	
Power Dis.:	12V:<288W;24V<576W	
Power output:	12V:<288W;24V<576W	
Work Temp.:	0~70°C	...
Size:	L195(mm)*W100(mm)*H18(mm)	
Weight:	460g	

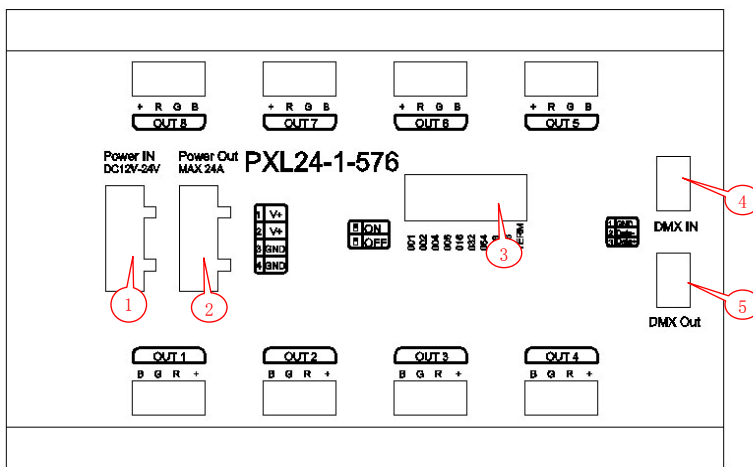

**Dimension:**

**Internal Block Diagram**

**Appearance**

- (1) Power IN
- (2) Power Out
- (3) Address setting interface
- (4) Driver output interface
- (4)DMX IN
- (5)DMX Out

◆ Driver output interface

Common in anode-V+ and with 8pcs of V+ interface & 24pcs of R,G,B output interface. Not only does it apply to the various of LED module in full-color & monocolour , but also it can self-trimming the output current based on the load of LED module.1A per channel shall not beyond the maximum.

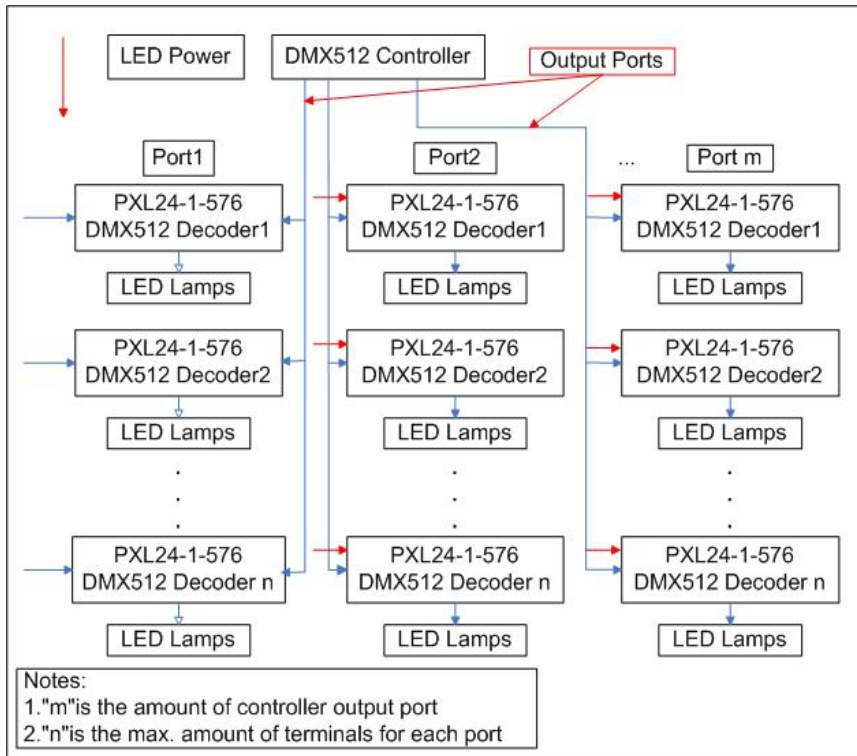

Remark:

Connect the anode and RGB wire of common anode RGB module to the output interface of decoder directly; Connect the anode wire of single-color module to V+ on decoder, and connect the cathode wire to one of RGB pin according to the LED's color; Connect several colors single-color module to one decoder, please connect their anode wires to V+ pin on decoder.

**Operating instruction**

PXL24-1-576 Decoder & Driver controlled by DMX512 controller, and its fore-end connect with the DMX512 signal transmit device. Take EC-DMX512 for example, its rear-end can connect with 0~24V circuit signal device. This instruction is only for LED driver.

The connecting diagram is as following.

**Connecting of DMX-512 Signal Cable**

- ◆ DMX signal cable used the CAT-3 cable, and DMX signal tells positive(+) from negative (-). While welding the DMX signal cable plug, there must pay much attention to know positive(+) from negative(-), and then connect the DMX512 signal cable with the corresponding input interface of PXL24-1-576 correctly.
- ◆ Connect a signal terminal at the end of the whole connection.
