

Feature

- Meet RDM(2009) protocol , compatible with DMX 512 (1990)
- Can be combined with supporting software scanning RDM equipment, set their start address, read their parameters
- Liquid crystal display visual display the current state
- Support buttons long press ,short press and Anti-shake
- 256 levels of grey, totally 16.77 million colors, really full color.
- Built-in 30 kinds of fixed mode, keep 5 kinds of custom mode for users to edit
- Parameters are automatically saved, power off is not lost
- By supporting software, we can easy update the changing effect
- Support for multiple output interface: female XLR - 3, RJ45
- Set aside a 3 line input terminals, can communicate with the glass panel to do the custom control

Technical parameter

Input Voltage:	5VDC
Power Consumption:	< 5W
Transmission signal:	RDM (2009), DMX512 (1990)
Transmission speed:	250Kbps
Pixels:	Depend on channels of lamp.
Lamp type can be controlled:	Wall washing light, Tube light, Cube light etc.
Description	Fixed 30 modes, such as flash, fade, stream, chase, etc.
Size:	132(mm)*105(mm)*48(mm)
G.W:	710g
N.W:	533g

Dimension

Panel schematic

● The top panel

①LCD

②MODE+: Short press, add a change model cycle; long press, continue to add a change model cycle

③MODE-: Short press, minus a change model cycle; long press, continue to minus a change model cycle

④PAUSE: Press the button, the LED keep current state

⑤LEVEL+/SPEED+: Mode1-7, Short press, brightness increase one level cycle; Long press, brightness continue to increase one level cycle; Mode 8-30, Short press, the speed cycle of LED increase one level, long press, the speed cycle of LED continue to increase one level.

⑥LEVEL-/SPEED-: Mode1-7, Short press, brightness decrease one level cycle, Long press, brightness continue to decrease one level cycle; Mode 8-30, Short press, the speed cycle of LED decrease one level, long press, the speed cycle of LED continue to decrease one level.

Note: when the press ② or ③ MODE key, which display MODE (in this controller, a total of 35 kinds of MODE) will order plus or minus change; When press the (4) the PAUSE button, the LCD will show "PAUSE" and led will hold the current state, when you press the button again, the LCD shows the current mode and speed again; When press ⑤LEVEL + / SPEED + :in mode 1-7, the brightness will increase gradually(once arrive level 255,then jump to level 0),in mode 8-30,the speed will increase gradually(once arrive 0s,then jump to 60s); When press ⑥LEVEL - / SPEED - :in mode 1-7, the brightness will decrease gradually(once arrive level 0,then jump to level 255),in mode 8-30,the speed will decrease gradually(once arrive 60s,then jump to 0s);

● The front panel

- ① Mini USB interface
- ② Three line RS485 input interface
- ③ RJ45 output interface
- ④ XLR-3 female output interface

Interface Introduction

● Input Interface

Mini USB input interface: Used to provide 5V power supply, Supporting software and RDM100 medium of communication

RS485 three line input interface

- 1. GND
- 2. RS485 input D-
- 3. RS485 input D+

● Output Interface

RJ45 Output interface

- PIN1: DATA+
- PIN2: DATA-
- PIN3-6: NC
- PIN7-8: GND

XLR-3 Output interface

- PIN1.GND
- PIN2.DATA-
- PIN3.DATA+

Mode List

Mode 1: Fixed Red
Mode 2: Fixed Green
Mode 3: Fixed Blue
Mode 4: Fixed Yellow
Mode 5: Fixed Light Blue
Mode 6: Fixed Purple

Mode16: Six color flash
Mode17: RGB flash
Mode18: RG flash
Mode19: RB flash
Mode20: GB flash
Mode21: R flash

Mode 7: Fixed White	Mode22: G flash
Mode 8: Seven colors fade	Mode23: B flash
Mode 9: Full colors fade	Mode24: Rainbow color strobe
Mode 10: Rainbow changing	Mode25: Six color strobe
Mode 11: Water flowing	Mode26: RGB strobe
Mode 12: Tail Chase	Mode27: RG strobe
Mode 13: Color stack	Mode28: RB strobe
Mode 14: Chase (yellow, pink)	Mode29: GB strobe
Mode 15: White flash	Moede30: White strobe

SelfMode1-5 will be introduced in the software operation sector.
